

The mark

Three layers, centered taper, wide to narrow. It encodes layered data refinement: raw inputs distilled to a decision. Never redraw, re-proportion, rotate, or recolor outside this sheet.

Wordmark

Sora. Marlen at SemiBold 600 in slate text, Solutions at Regular 400 in secondary gray. This weight contrast is fixed. Sora is free (SIL OFL); install locally for documents.

Color

Layer 1 #DCE7F0

Layer 2 #6E9DC4

Layer 3 / accent #1C4468

Tile #1A2B3C

#1C4468 is the only saturated color in Marlen documents: headings, rules, table headers, chart accents. On dark backgrounds the mark uses the lighter ramp (see mark_dark.svg).

Clear space and minimum size

Keep-out zone: one layer height (dashed) on all sides. Nothing enters it.

Minimum sizes: mark 20 px / 7 mm alone, lockup 110 px / 39 mm wide.

At 32 px and below use the simplified sibling: square corners, thicker bands (mark_small_dark.svg). The favicon is built from it. Do not shrink the primary mark.

Backgrounds

Two approved contexts only: white / very light gray, or the #1A2B3C dark tile.

Never place the mark on photos, gradients, mid-tone fills, or busy backgrounds.

Single-color fallbacks: mark_mono_slate.svg (print, stamps) and mark_mono_white.svg.

File inventory

svg/	9 masters: marks (light, dark, 2 mono, small sibling), tiles, 2 lockups. Scale infinitely; use for print and web.
png/	17 exports: marks and tiles at 16 to 512 px, lockups at 2x for Word and PowerPoint.
favicon.ico	16 + 32 + 48 px, built from the simplified sibling. Drop at web root.
font/	Sora variable + static 400 and 600 TTFs, with the OFL license text.
